Abstract: English videos on YouTube can be utilized as an alternative medium for learning listening subjects. This research attempts to explore EFL students’ perspectives on using English videos on YouTube as a learning medium to enhance students’ listening skills. A mix-method research design was used to explore students’ perceptions of using English video to enhance their listening skills. The data in this study were obtained from questionnaires and semi-structured interviews which were administered online to thirty-two students of the English Language Education Study Program (ELESP) at Universitas Teknologi Yogyakarta using a convenience sampling technique. The findings revealed that of 32 respondents, 31 of them viewed the English video platform on YouTube to help them a lot in learning listening subjects. Of 32 respondents, 29 of them thought that their listening skills improved a lot after watching and listening to videos on YouTube. It indicates that the majority of respondents have positive perceptions of the utilization of this platform because it helps them in facilitating their learning needs. However, 2 respondents disagree about the statements for some reasons.

Keywords: enhance; English videos; listening skills; perspective; YouTube.

INTRODUCTION
Technology has advanced at a breakneck pace in our information age. As a result, technological advancements are critical in education, particularly in the teaching of English. Because of the rapid changes in technology, educators and students have had to be innovative in their search for appropriate teaching and learning tools. One
Exploring EFL students' views on using Youtube videos for improving listening skills in English

of the popular teaching and learning platforms that offers plenty of authentic material is YouTube (Nasrullah, 2021; Rusmanayanti & Nasrullah, 2020). According to Fadillah et al., (2023), YouTube is a very useful online media for learning and teaching.

Listening is one of the most difficult skills to master in English, especially for students with limited English proficiency (Calhyono, 2017). If the dialogue is recorded by a native speaker with a different accent and pace, listening becomes more challenging. Because students just listen to the chat tape over and again, listening is also seen as a boring subject. Therefore, the presence of YouTube can be the most suitable tool to improve learners’ listening skills (Tran, 2022).

As a learning media, YouTube has been famous and used by the internet community all over the world because it facilitates EFL learners in learning listening subjects (Lestari, 2019). Moreover, they can use YouTube videos as learning resources, e.g. English movies, songs, and talks to improve their listening skills. Today, YouTube provides many videos that may be used as English learning materials to develop students' listening abilities (Aboudahr, 2020). Therefore, YouTube has become the most popular video-sharing application on the planet (Afrizal & Rina, 2023; Ratmaningsih & Gumiandari, 2022).

YouTube videos can provide a variety of benefits. YouTube. According to Sembiring & Katemba, (2023). YouTube is one of the most well-liked and alluring forms of media to pique learners’ interest in studying English. YouTube provides the chance for learners to listen to real native English speakers and be able to interact with them (Hartatya & Arbian, 2022).

YouTube made the learning process more enjoyable. It may stimulate students to gain knowledge and experience in their learning process. Besides, it can be used as a learning tool to arouse students' enthusiasm for learning in class and reduce boredom (Marbun et al., 2023).

YouTube is free for everyone that wants to learn that can be used to develop independent and creative learning (Lathifah & Prastowo, 2020). Indeed, utilizing video to practice listening skills may provide students with a clear image of how the language is utilized, as well as eliminate ambiguities in native speakers' voices and actions. Furthermore, learning media can also grab learners' interest and motivation in the process of learning, making it more meaningful (Prayitno & Mardianto, 2020; Rosmiati & Lestari, 2021).

YouTube might be a good place to start looking for appropriate learning resources. Students, listening comprehension can be improved by using video, particularly YouTube videos, which is the largest video source on the internet. It can also be used to develop a variety of new topics or issues (Karkera & Chamundeshwari, 2018).

Watching videos from YouTube can help enhance the process of increasing listening abilities. According to Rahman et al., (2022), YouTube may drive students’ motivation to improve their language abilities by exploring the stuff they freely access online. Meanwhile, Sulaiman et al., (2022), confirm that YouTube can also give learners the chance to listen to native English speakers and be able to interact with them.

Students of the English Language Education Study Program (ELESP) at Universitas Teknologi Yogyakarta had experienced using audio-video on YouTube as a medium of learning the listening subject in the previous semester. Based on our preliminary observation in their listening class, we found out that students were very happy and enjoyed their class watching and listening to the video provided by their lecturer. Students may benefit from viewing English movies and songs since they may see native speakers' expressions of how to pronounce the words and sentences. Furthermore, videos could help them improve their vocabulary mastery and expand their grammar.

Despite the benefits of using video as a medium of learning and listening, some students thought that utilizing video became more challenging as well. Researchers in the present study are interested in further exploring the students' perceptions of using video on YouTube as a medium of learning listening to enhance their listening skills.

Although there have been several studies on the use of video on YouTube in the classroom, the studies on the usage of YouTube as a medium of learning listening skills are a relatively fresh area for investigation. Therefore, the present study is worth conducting to confirm the previous findings and to figure out the power of video on YouTube to enhance students' learning and listening skills at the tertiary level of education.

This effort is to confirm the previous findings on a similar issue and to provide different perspectives towards using audio video as a learning medium of listening at the tertiary level of education. Therefore, the objective of the research is to explore EFL students' perspectives
on using English videos on YouTube as a learning medium to enhance students’ listening skills.

METHOD
This research attempts to explore EFL students’ perspectives on using English videos on YouTube as a learning medium to enhance students’ listening skills. A mix-method research design was utilized to describe the students’ perspectives on using English videos on YouTube as a medium of learning to enhance their listening skills. To obtain the data needed in the present study, a questionnaire and semi-structured interview were administered online to thirty-two students from the fifth semester at the English Language Education Study Program (ELESP) of Universitas Teknologi Yogyakarta using a convenience sampling technique.

The questionnaire and semi-structured interview items have similar issues, consisting of five questions each, aimed at figuring out students’ perspectives on the use of videos on YouTube in improving their English listening skills. The questionnaire items included the frequency of using YouTube, topics they usually watch on YouTube, whether or not YouTube helps them in learning English and improving their listening skills, and whether or not YouTube can enrich their vocabulary. Meanwhile, the semi-structured interview was conducted to further explore the information obtained from respondents’ questionnaires on how they perceive the use of video on YouTube to enhance their listening skills.

The semi-structured interview was conducted to further explore how they perceive the utilization of English video towards their listening skills. Eighteen respondents participated in the interview session by using convenient random sampling. It took 7 minutes for each respondent to complete the session. In the interview session, they were asked five questions, they are 1) the frequency of using YouTube; 2) topics they usually watch on YouTube; 3) whether or not YouTube helps them in learning English; 4) whether or not YouTube and improving their listening skills; and 5) whether or not YouTube can enrich their vocabulary.

Moreover, the questionnaire used the four Likert-scale, ranging from 1 (Strongly Disagree) to 4 (Strongly Agree). After obtaining all data needed, the researchers analyzed the results of respondents’ questionnaires and interviews using descriptive analysis. The data analysis was done using the interactive model of Miles et al., (1994), namely; data collection, data reduction, data displaying, and conclusion.

RESULTS AND DISCUSSION
Results of students' responses to the questionnaire
To gather the data about the student’s perceptions of the use of video on YouTube in improving their English listening skill, the researchers used the questionnaire as quantitative data and also conducted a semi-structure interview as qualitative data with the fifth-semester students of ELESP at Universitas Teknologi Yogyakarta. The respondents’ responses to five items in the questionnaire are presented in Table 1 as follows:

Table 1 shows the respondent’s responses to the five questions concerning their perceptions of using video on YouTube as a medium for learning English to improve their listening skills. The
findings revealed that 18 (56.3%) of the respondents agree with item 1 “I usually access YouTube every day” and there are 9 (28.1%) of the respondents strongly agree about that statement. However, there are 5 (15.6%) of them disagree about the statement and no one strongly disagree about the statement in item 1. There are 1 (65.6%) of the respondents who agree about item 2 “I usually watch the video for learning listening subjects on YouTube”, and about 4 (12.5%) strongly agree that they watch the video for learning listening subjects. However, there are 7 (21.9%) of them disagree and no one strongly disagrees about the statement.

Furthermore, there are 25 (78.1%) of the respondents agree with item 3 "YouTube helps me very much in learning English listening subject”, meanwhile there 6 (18.8%) strongly agree about the item. The data showed that only 1 (4.1%) disagree and no one strongly disagree about the statement. There are 23 (71.9%) of the respondents agreed with item 4 "My English listening skills improve a lot after watching English videos on YouTube", and about 6 (18.8%) of them strongly agree that their listening skills improve a lot after watching English videos on YouTube. There are 3 (9.4%) of them disagree and no one strongly disagrees about the statement. There are 27 (84%) of the respondents agreed about item 5 "I learnt a lot of vocabulary while listening and watching videos on YouTube" and there are 3 (9.4%) of them strongly agreed with the statement that they learn vocabulary while listening and watching video on YouTube. However, there are 3 (6.3%) disagree and no one strongly disagrees about the statement. It is seen from the data in Table 1 that the majority of respondents have positive perceptions of using English videos on YouTube because the learning platform could improve their English and enhance their listening skills.

Results of students’ responses on the semi-structured interview

Apart from the questionnaire, a semi-structured interview was also conducted to further explore the students’ perceptions of using video on YouTube to improve their English listening skills. The results of the interview showed that the respondents watched English videos about English learning materials on YouTube about 2-3 times a day to improve their listening skills, for instance, as stated by two respondents; AT, and MS, as presented in excerpt 1:

“I like to watch the video about English learning materials video on YouTube 2 times a day because it helps me improve my listening and speaking skills.” (AT).

“I watched English videos 2-3 times a day for 1 hour because I could find many learning sources to learn English and have chances to practice my listening skill.” (MS).

From interview results with the respondents, it was found that they would like to watch the English Channel, vlog, talk podcast, songs, and movies on YouTube to improve their listening skills and enrich their new vocabulary. For instance, SAB, AP, AS, and SP, express their interest in watching various types of English channels to improve their English listening skills and increase their vocabulary achievement. The followings are their views about what to watch on YouTube, as seen in excerpt 2:

“To improve my listening skill and enrich my vocabulary, I learn English through several English learning platforms, such as ABC Channel, TED Talk Podcast, and native English daily vlogs. These platforms make it possible for me to train my ear to get accustomed to hearing the native speakers’ accent and topics discussed”. (SAB)

“I frequently access listening materials on YouTube like TED, the Late Show, English with Lucy, Vogue, and English Daily to improve my English and listening skills”. (AP)

“Watching English movies and listening to English songs through YouTube is very interesting and beneficial for me to improve my English and gain new vocabulary, Besides, watching geographical channels could improve my vocabulary mastery”. (AS)

“For me, watching Daily vlog, Oxford online English, and English songs are worth improving my listening skills and new vocabulary”. (SP)

In response to whether or not English videos on YouTube help the respondents improve their listening skills, the majority of respondents stated that English videos on YouTube assist them a lot and bring a positive contribution to the improvement of their English listening skills. For instance, as stated by respondent AJ, in excerpt 3:

“Yes, it helps me very much in improving my listening skill by listening to the Linguamarina
channel on YouTube. This channel provides English learning materials which can help me learn English because I could see, and hear how she pronounces words and expressions”. (AJ)

Other respondents, NT, MS, SP, and AA, state that English videos on YouTube help them a lot in improving their English and enhancing listening skills because, through YouTube, they could access English learning materials delivered by native speakers of English. The followings are NT, MS, SP, and AA’s thoughts as seen in excerpt 4:

“English movies on YouTube help me very much in improving my English and listening skills because I could hear native speakers’ pronunciation and also see the subtitle when watching them”. (NT)

“...yes, there are many learning resources that I could use to improve my listening ability. Besides, I imitated the native speakers of English accents, and expressions, thus, my English improved significantly” (MS)

“English videos could assist me in improving my English listening ability. By watching interesting content on YouTube, I learned a lot and entertain myself”. (SP).

“...yes, English videos on YouTube help me very much in sharpening my listening skills as I could access several learning platforms, for instance, Linguamarina: an English Channel owned by a Russian who lives in the USA. Moreover, I am very excited to watch the aforementioned channel because the contents help me a lot in improving my English listening skill” (AA).

However, two respondents DF, and TA, have opposite views on the use of English videos on YouTube, as reflected in excerpt 5:

“...the English videos on YouTube do not help me in improving my English significantly, but to make conversation with native speakers of English in tourism spots”. (DF)

“...It does not help me very much in improving my English listening skill because I mostly utilized other learning platforms to learn English”. (TA)

In response to whether or not videos on YouTube bring a positive impact on the respondents’ listening ability, some respondents, for instance: AP, AR, AM, MS, and DF viewed that it help them very much because their English significantly improved after watching English video on YouTube, as addressed in excerpt 6:

“When I watched English video on YouTube without its subtitle many times, I acknowledged the topic of the video, enrich my vocabulary, and understand what the native speakers talk about easily”. (AP)

“The impact of watching English videos on YouTube is very significant in improving my listening skill, especially my vocabulary mastery”. (AR)

“My listening ability has been improved significantly since I listen to native speakers of English on YouTube. I could understand the topic and the expressions uttered”. (AM)

“Listening to English videos on YouTube made it possible for me to gain new vocabularies because I could see the subtitle on the screen, and know how to use the expressions correctly”. (MS)

“It helps me very much in understanding the pherases, abbreviations, and acknowledging the variety of native speakers’ conversation”. (DF)

Despite the benefit of watching English videos on YouTube, two respondents, for instance, RS, and TA viewed that English videos on YouTube are not significantly impacted their English competence, as pointed out in excerpt 7:

“...so far, English videos on YouTube have not contributed significantly to the improvement of my English, especially my listening ability”. (RS)

“Watching English videos on YouTube has a small impact on my listening ability”. (TA)

In the interview session, respondents were asked to provide their perceptions on whether or not listening and watching English videos on YouTube can enhance their vocabulary mastery. The results of the interview showed that all respondents stated that listening to and watching English content videos on YouTube made them possible to figure out unknown words and expressions which in turn enriched their vocabulary mastery. The reasons why listening to and watching English content videos could enrich
their vocabulary mastery can be known from NJ, AP, SA, and AA thoughts’ in excerpt 8:

“...yes, by listening and watching English videos on YouTube, I could learn words sounds and I must find out the meaning of the words or expressions. I believe that by doing so, it increases the number of my new vocabularies over time”. (NJ)

“...yes, because if I watch and listen to English videos, I often found out some difficult words and expressions, then I tried hard to translate those words. I can gain new vocabulary, and understand the vocabulary”. (AP)

“...yes, my new vocabulary enhanced a lot since I tried hard to consult the dictionary when I found difficult words and expressions. Thus, my vocabulary mastery increased significantly”. (SA)

“Watching English videos on YouTube helps me very much in enriching my new vocabularies because I learned a lot through YouTube because I can access many kinds of English contents, using American English, British English, and Australian accent” (AA).

The existence of technology nowadays makes it possible for learners to gain knowledge and skills, including in the field of education. The use of internet-based English learning materials on YouTube has allowed students to learn from a variety of interesting learning platforms online. English videos on YouTube are one of the learning platforms that can be used to improve their English, especially to enhance their listening skills. Watching video as an audio-video medium of learning may improve English language students' listening comprehension and ability (Fadillah et al., 2023; Rorimpandey, 2019; Rakhmawati et al., 2023).

The quantitative data from the present study revealed that of 32 respondents, 27 have been watching and listening to English videos on YouTube and other learning platforms online every day about two to three times a day. The watching and listening activities are considered a high frequency which in turn accommodates their learning needs. Furthermore, the data showed that respondents usually watch English learning materials on YouTube to improve their listening skills. Of 32 respondents, 25 respondents watched and listened to an English video for completing their English listening tasks. The present findings support the findings of Hendrayasa, (2021), who states that students are interested in learning via YouTube because it helps them understand their listening subject.

Furthermore, of 32 respondents, 31 of them viewed that the English video platform on YouTube very helps them in learning listening subjects. Only 1 respondent disagree about this statement. It indicates that the majority of respondents have positive perceptions of the utilization of this platform because it helps them in facilitating their learning needs, wants, and lacks. Moreover, watching English videos on YouTube brings a beneficial impact on respondents' English achievements, especially listening skills. Of 32 respondents, 29 of them thought that their listening skills improved a lot after watching videos on YouTube. Students have a positive attitude in learning English listening skills (Fakhruddin et al., 2020).

Of 32 respondents, 30 of them utilized the platform for learning vocabulary. It means that the majority of respondents made use very well of English videos on YouTube to gain new vocabulary while listening to and watching English materials. However, 2 respondents disagree about the statement because they mostly use other learning platforms and applications to improve their English and enhance their listening skills. Another reason why they disagree about the statement is that they prefer to talk face-to-face with foreigners than watch and listen online through the YouTube platform.

Apart from quantitative data, the present study provides qualitative data which was gathered from semi-structured interviews. It was conducted to further explore the information obtained from the results of respondents' questionnaires on how they perceive the use of video on YouTube to enhance their listening skills. The respondents 'responses to five items in the interview question varied among them. The results of the interview showed that the majority of respondents watched English videos on YouTube every day about two to three times a day. Furthermore, they watched English movies and listened to English songs on YouTube to learn new vocabulary and learn how to pronounce words while listening to the native speaker's pronunciation. The present study supports the findings of Hartatya & Arbian, (2022), who state that YouTube provides the chance for learners to listen to native speakers of English.

Moreover, they viewed the use of English videos on YouTube bring a positive impact on their learning outcomes because their listening
skill and vocabulary mastery have increased significantly by watching the English video through the platform. Listiani et al., (2021), states that YouTube can be a useful learning resource for young learners. In addition, they gained new knowledge and interesting experience using the YouTube platform. The present study is in line with Yuyun & Simamora, (2021), who confirm that YouTube video benefits EFL learners, such as improving students' confidence and interest in learning.

English-based videos from YouTube can help students to improve their English skills. Furthermore, YouTube videos provided plenty of opportunities for listeners to make their interpretations while also practicing their listening skills. The present findings revealed that the utilization of the platform English songs in learning English is useful for the students, for instance, the results of the interview with the first respondents NT, MS, SP, and AA, showed that English videos on YouTube help them a lot improving their English and enhance listening skills because, through YouTube, they could access English learning materials delivered by native speakers of English. Surprisingly, two respondents, for instance, RS, and TA perceived that English videos on YouTube are not significantly impacted their English competence.

Furthermore, English content videos on YouTube made them possible to figure out unknown words and expressions which in turn enriched their vocabulary mastery. Since YouTube is accessible by many people from all over the world, this platform become one of the favorite English learning channels for students, especially EFL students in Indonesia. Saputra & Fatimah, (2018), confirm that the use of YouTube is effective instructional media for extensive Listening tasks.

English-based videos from YouTube are beneficial for EFL students to learn a foreign language because students can search or choose what materials they are going to learn and enjoy since it facilitates students to learn more about English language skills, especially listening subjects. (Cahyana, 2020), confirms that YouTube videos bring a positive impact on students' English acquisition and are helpful for teachers in delivering the topic to students. YouTube videos provide many benefits for students in their listening skills (Dung, 2021; Settiawan et al., 2022). According to Afrizal & Rina, (2023), learning to listen using YouTube in class is fun, and students became more self-confident to communicate in English. YouTube is a great source of teaching media and motivates students, and should be embedded into the EFL classroom (Hussin et al., 2020; Nasution, 2019; Saed et al., 2021).

CONCLUSION
Some important points to be highlighted in connection with the present study are as follows: 1) English videos on YouTube could help students to improve their English and enhance their listening skills. Besides, it may be used as an alternative medium of learning listening subjects for EFL students both inside and outside the classroom; 2) The majority of respondents in the present study made use of the YouTube platform to search for learning materials and get new experiences in learning English. They could access a variety of learning instructions and figure out the unknown words and expressions while listening and watching English videos which in turn enriches their vocabulary mastery: 3) English video on YouTube is not the only learning platform for learning to listen, there are plenty of learning platforms that may be utilized by students as the media of learning English, especially to improve listening skills and enhance vocabulary mastery.

Bearing in mind the importance of watching and listening to English videos to improve listening skills and enhance vocabulary mastery, it is recommended that EFL students utilize English-based videos on YouTube and other learning platforms which can facilitate their learning needs, especially listening subjects. Since the learning materials can be easily accessed through many learning platforms on the internet, it is highly recommended that teachers utilize the platforms for teaching listening, and assign their students to explore learning instruction both inside and outside the class. However, the present study has its shortcoming, therefore, it is recommended that future researchers conduct a similar study by involving a large number of respondents across different universities using a survey design. Besides, to compare the effectiveness of using YouTube and other learning platforms as media for learning listening and speaking skills using a survey and an in-depth interview.

ACKNOWLEDGMENT
We would like to thank the Rector of Universitas Teknologi Yogyakarta, the LPPM, and the Rector of STKIP Tamsis Bima for their research permit.
